Touch...The Sky

# Qticket Touch

The versatility of the touchscreen

## Technical Specifications Qticket Touch Kiosk

Dimensions: H1350 x W300 x D300  
Weight: aprox. 19 Kg.

The Qticket model was developed for public or private institutions to attend the clients where, somehow, a management service / waiting queues is needed. It is exclusively for indoor uses.

Through a 10" touchscreen the user can see what services are available and take the ticket.

Compared with a simple buttons kiosk, Qticket Touch has the advantage of being able to include more information on services because it is a touch screen with interactivity.

You can also configure the screen in standby mode (without any user touching the screen) setting for advertising, in video or still image, of the company / institution where the kiosk is installed.

The information paper with indications of the functions / services can be easily modified.

This model can be manufactured in stainless steel or painted steel (available in all RAL colors) using steel plate of 1,5mm to 2mm.

The Qticket Touch can be equipped with an Intel Atom N450 CPU, 1.66gh processor, 150GB hard drive, 1 Gb Ram, 10/100 ethernet Card, WiFi, and Windows 7 Home Premium.
