

RAL COLORS CATALOG

K7 System

K7 RAL Colors Systems

Kiosks may be produced in stainless steel, painted steel or painted MDF in any RAL color.

The K7 RAL system with 180 colors, is smaller than the NSC, but represents standard colors on many materials, equipment and brands available in the market, and also in Partteam multimedia kiosks.

There are several catalogs of RAL colors, but common used in Portugal is the K7 which features a glossy finish.

ATTENTION: Other RAL colors from other systems can be used upon request.

WARNING: RAL colors displayed on your monitor have differences to the original catalog of RAL colors. This may be, for example, because of the calibration of your computer monitor (brightness, contrast, etc.).

Always look a original catalog of RAL colors in any paints shop.
